Part III: Detailed Office Action

A restriction requirement was made in this application in paper number 9, mailed 9/23/99. In response to that requirement, applicants elected the invention of antibodies, claims 1-5, 7-9 and 11-19, with an election of species of antibody 12D5, in paper number 12, received 11/12/99. On 5 9/7/00, applicants filed a request for a Continued Prosecution Application (CPA), with a preliminary amendment canceling the previously elected claims, and introducing generic claims to nucleic acids encoding antibodies, effectively switching the elected invention. An Office Action on the Merits of those claims was issued on 11/27/00, paper number 17. That office action indicated generic claims to nucleic acids encoding anti-mpl receptor antibodies to be obvious over the prior art. In response 10 to that Office Action, applicants response, paper number 19, filed 5/23/01, introduces new claims to patentably distinct species of nucleic acids encoding antibodies. Accordingly, a species election requirement is now deemed necessary:

This application contains claims directed to the following patentably distinct species of the claimed invention: Nucleic acids encoding 12E10, 12B5, 10F6, 12D5, Ab1, Ab2, Ab3, Ab4, Ab5 and 15 Ab6, respectively. These species are considered to be distinct because each has a separate and distinct physical structure that requires separate search. Given the exponentially increasing size of the commercial and proprietary nucleic acid databases, search of more than a single set of nucleic acid sequences is deemed to present an undue burden on the resources of the US Patent and Trademark Office.

20 Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, 25 including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims

Art Unit 1647

to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 C.F.R. § 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
